- C. Performance Requirements:
  - 1. Limit air leakage through assembly to 0.06 CFM/min/sq. ft. (.00003 m<sup>3</sup>/sm<sup>2</sup>) of wall area at 6.24 PSF (300 Pa) as measured in accordance with ASTM E283.
  - 2. Water Resistance: No water leakage when measured in accordance with ASTM E331 with a static test pressure of 10PSF.
  - 3. Uniform Load Deflection under ( ) psf positive and ( ) psf negative design wind pressure normal to the plane of the wall, shall not exceed L/175 of the clear span or 3/4", when tested in accordance with ASTM E 330.
  - 4. Uniform Load Structural at a pressure 1.5 times the design wind pressure in accordance with ASTM E 330.
  - 5. System shall not deflect more than 1/8" at the center point, or 1/16" at the center point of a horizontal member, once deadload points have been established.
  - 6. System shall accommodate expansion and contraction movement due to surface temperature differential of – 30 degrees F to +180 degrees F.
  - 7. Seismic testing shall conform to AAMA recommended static test method for evaluating performance of curtain walls and storefront wall systems due to horizontal displacements associated with seismic movements and building sway.
  - 8. Sound transmission in accordance with ASTM E 90.

1.04 Quality Assurance

- A. Single Source Responsibility:
  - 1. Obtain entrances, storefronts, ribbon walls, window walls, curtain walls, window systems, and finish through one source from a single manufacturer.
- B. Provide test reports from AAMA accredited laboratories certifying the performances as specified in 1.03.

1.05 Warranty

- A. System shall be warranted against failure and/or deterioration of metals due to manufacturing process for a period of two (2) years.
